

Your Project

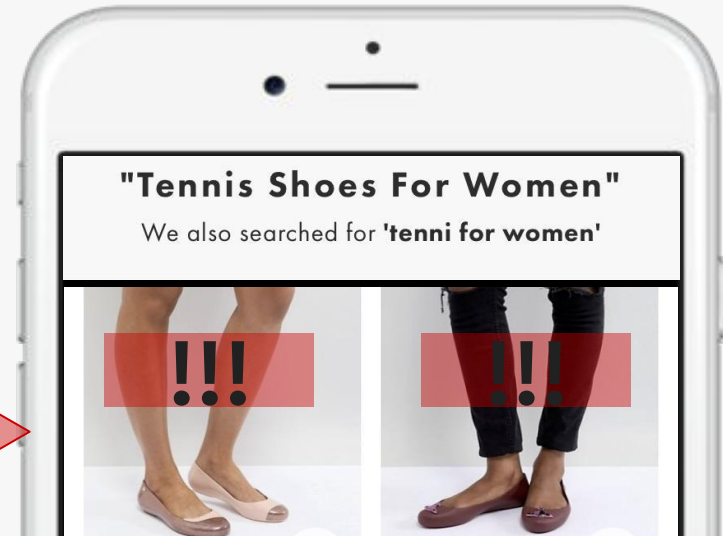

Powering ecommerce
search with
semantics and
predictive AI

Team names

The problem: the way we search is different now and most companies must adapt

70% of ecommerce companies do not return relevant results and lose **more than 25% of their visitors** because they do not have the technology to live up to consumers' expectations.

**We fix this by providing AI search,
and autocomplete**

Product Vision (Inspirational)

**What makes a
great sales
associate?**

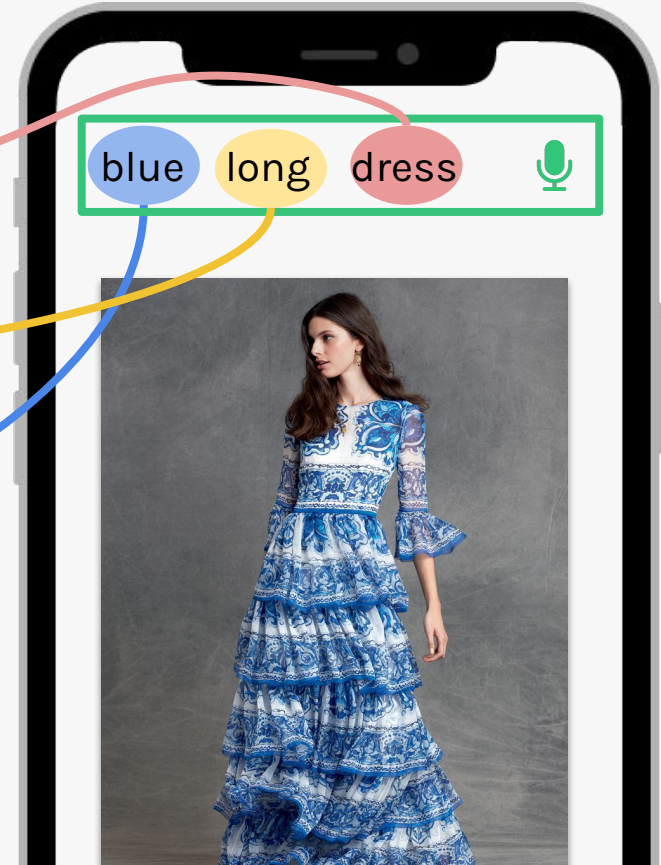

She knows the products
